It is a group-14 hydride and the simplest alkane, and is the main constituent of natural gas. The relative abundance of methane on Earth makes it an attractive fuel, although capturing and storing it poses challenges due to its ... Natural gas origin, composition, and processing: A review ... Natural gas (NG) is a naturally gaseous hydrocarbon mixture that is formed under the earth's surface. NG is considered to be the cleanest fossil fuel and is a safe source of energy when transported, stored and used. The removal of CO₂ and N₂ from natural gas: A review of ... This article provides an overview of conventional and developing gas processing technologies for CO₂ and N₂ removal from natural gas. We consider process technologies based on absorption, distillation, adsorption, membrane separation and hydrates. Fundamentals of Natural Gas Processing | Ali Adnan ... this book is not for me, but it is perfect book to understand all gas process from the wellhead to the market. i hope it will be useful for all engineers 45 Reasons why wind power can not replace fossil fuels ... Many sites with the nation's best wind power resources have minimal or no access to electrical transmission facilities.
