Learning Comprehensible Theories from Structured Data Learning from examples is an important topic in the study of machine intelligence. We consider the general problem of learning comprehensible theories from structured data in this thesis. The three key phrases here are 'learning', 'structured data', and 'com-prehensible theories'. We now elaborate on each of these in turn. Logic for Learning: Learning Comprehensible Theories from ... From the reviews of the third edition: "John has tried his hand at machine learning, and his aim in Logic for Learning is to demonstrate 'the rich and fruitful interplay between the fields of computational logic and machine learning'. ... Andrew Learning Comprehensible Theories from Structured Data ... This tutorial discusses some knowledge representation issues in machine learning. The focus is on machine learning applications for which the individuals that are the subject of learning have complex structure. To represent such individuals, a rich knowledge representation language based on higher-order logic is introduced. Logic for Learning: Learning Comprehensible Theories from ... This book provides a systematic approach to knowledge representation, computation, and learning using higher-order logic. For those interested in computational logic, it provides a framework for knowledge representation and computation based on higher-order logic, and demonstrates its advantages over more standard approaches based on first-order logic. Open Research: Learning Comprehensible Theories from ... This thesis is concerned with the problem of learning comprehensible theories from structured data and covers primarily classification and regression learning. The basic knowledge representation language is set around a polymorphically-typed, higher-order logic. Logic for Learning | SpringerLink The book should be of interest to researchers in machine learning, especially those who study learning methods for structured data. Machine learning applications are becoming increasingly concerned with applications for which the individuals that are the subject of learning have complex structure.
