Big Data analytical methods – related to Q2. To facilitate evidence-based decision-making, organizations need efficient methods to process large volumes of assorted data into meaningful comprehensions (Gandomi & Haider, 2015). The potentials of using BD are endless but restricted by the availability of technologies, tools and skills available for BDA. Multisensor data fusion: A review of the state-of-the-art ... 1. Introduction. Multisensor data fusion is a technology to enable combining information from several sources in order to form a unified picture. Data fusion systems are now widely used in various areas such as sensor networks, robotics, video and image processing, and intelligent system design, to name a few. IEEE Xplore: IEEE Communications Letters The IEEE Communications Letters publishes short papers in a rapid publication cycle on advances in the state-of-the-art of communication over different media and channels including wire, underground, waveguide, optical fiber, and storage channels. Both theoretical contributions (including new techniques, concepts, and analyses) and practical contributions (including system experiments and ... Sam's Laser FAQ - Items of Interest Back to Sam's Laser FAQ Table of Contents.; Back to Items of Interest Sub-Table of Contents. Introduction to Items of Interest This chapter represents a potpourri of general laser information. Basically, when something interesting and relevant to lasers shows up on one of the USENET newsgroups or elsewhere, it gets stuck in here. Voltage clamp - Wikipedia The voltage clamp is an experimental method used by electrophysiologists to measure the ion currents through the membranes of excitable cells, such as neurons, while holding the membrane voltage at a set level. A basic voltage clamp will iteratively measure the membrane potential, and then change the membrane potential (voltage) to a desired value by adding the necessary current.
